

M.D.C.XLIII. 15

ET

SIVE

Speculum anni à Nat. J. C.

Et abastrorum creatione Kepleriana 5636.

Wherein is contained a three-fold
Kalendar, viz. The Iulian or English, the
Gregorian or Forraigne, and the true Ac-
count, with all the Lunations, Planetary
Configurations, Cœlestiall obser-
vations, and Astrological Predi-
ctions therein.

Calculated exactly, and composed by
for the
year of Christ,

*In oVo grandis conVenVs SatVrni &
IoVIs Mira profert In orbe Xplano*

*O quare mira & magna potentia Celi est,
Quo sine nil pareret Tellus, nil gigneret Aequora*

An Abstract of the Tide Table with the age of the Moone shewing the hours and minutes of full Sea at London Bridge, as also at Funnorth, Harlepool, Rye Bay, Amsterdam, La Hague, Baitane, and the places adjoining every day of the year, 1643.

The age of the Moone	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
of the Day of the Moone	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30
Full Sea at London	3	4	5	6	7	7	8	9	10	11	11	12	1	2	3
at London. mi	48	24	4	12	48	6	24	12	0	48	6	24	12	0	

Take of these tables: very easie: Example on the other side against the first day of January I find the Age of the Moone to be 21. which I look in this Table and find under the age of the Moone decreasing these figures, 7 hours and 48 minutes which sheweth that it is full Sea at London Bridge &c. at 7 a clocke, and 48 minutes past in the morning. You must note that every Tide altereth 24. minutes of time, and the full Sea in the said places will be 24. minutes later in the afternoon, viz. at 8 of the clock, and 12. minutes past: Doe this with any other place, as the Tables direct you, and you shall finde it so easie that unless you have some subtilties, or pleasures ignorance, you will neede no further directions.

Yet you must observe that it floweth one point of the Compass: more in the Spring tides, than in the New and full Moones, when it both at the Spring tides, that is, at the quarters of the Moone, especially if it be a River where there is any imbayment, and that is of good distance from the Sea; yea when there is neither rage of countervailing-floods nor other causes to produce or hinder the said effect, As for example, It floweth at London-bridge at the New or full Moone, when the Sea is South-west or North-east: but in the quarters of the Moone it scarcely floweth there when the Moone is South-west and by South, or North-east and by North. And at London-bridge it commonly floweth 5 hours and ebboeth 7 hours, though at other places it is 6 hours flood and 6 hours ebbe. Land floods and great winds much alter the Tides and so doe the Aspects of the Planets to the Moone and her latitude: For if she have North latitude, she swelleth the Seas the sooner, but South she raiseth the Sea later.

The Sea hath five, the more, count she keeps:
From deep to shallow, and from the shores to deepes.
What ere the cause be it never is without
But's ebbing, flowing, alwaies going round.
Tune the Moon (of her own) with her change-full Lawes
Commands the Ocean, and it's motion caule.

The Julian, or
English Account

Could man but read in Gods great book of Heaven,
Where Starres (like golden letters) infinite
Are plac'd; or thoroughly know the Planets seven,
Then be the course of Tyme might truly write,
And speak of change of Aires, and turnes of States,
For stars shew men, Kingdomes, and Countreys fates.

Great states conjoyn'd, do shew great alterations
 In many Kingdomes, Countries, nay all Nations
 shall suffer change, tosaith th' Astrologer,
 For in this Moneth Saturne with Jupiter
 And all the Planets one another viewing
 By severall rays, great Wonders are foretelling.

The Julian, or
English Account

The Sunne approaching to his Exaltation,
Having left Saturne, falls in conjunction
With Iupiter, just entering both together,
The heavenly Ram, causing great change of weather,
With store of rain or snow and sturdy stormes,
So Hermes threatens, if not worser harmes.

The false or
English Account

A Square of illen Saturne, angry Mars
And Ioue assisting, bodes some suddain jarres.
And wily Hermes playes his wonted pranks
In thorns, for which wee'l con him little thanks.
Saturn and Venus have no good parent,
Hee's in his fall, She's in her detriment.

The Julian, or
English Account

Venus and Jove together knit their powers,
Bring pleasant weather with some fertile showers,
Which Mars maligning strives to put asunder,
And threatens us with lightnings, stormes & thunder,
Heavens constant motion, and stars great Aspects
Do variously produce most rare effects.

The Julian, or
English Account.

The influence of pleasant Pleiades,
Is much augmented by sweet Venus rayes,
Both rise, and culminate, and set together,
Distill mild dewes, 'Tis not unwelcome weather :
But see how suddenly our joyes are quash'd,
The Winds do moore the earth with shower's is dash'd.

The Julian, or
English Account

Mars joyn'd with Cor Leonis and in Trine,
To Jupiter who doth with Phœbus square,
Do duplicate Sol's fires, whose rayes to shine,
They will raise thunder, or much heat the Aire,
'Twill not be alwayes Summer. Lose no day
To carry in, when you have made your hay.

The Julian, or
 English Account

A square of Venus, and a friendly Trine
 Of Sol to Iove, makes Sol most clearly shine,
 As women maske their faces that are faire,
 So Saturn's aspect cooles and darks the Aire,
 Some comfort yet, Hermes is not behind,
 He joyne with Iove, both bringing wholsome wind.

The Julian, or
English Account

The Clouds doe thicken, Heavens upon us frowne,
Mischiefes are threatn'd, but on whom, or where,
I list not tell; Let each man sweepe his owne
Doore cleane; there then will be lesse cause of feare
In publike dangers, every one may share,
But he is happy, that can learn't Beware.

The Julian, or
English Account

Sol in his fall, Mars in his detriment,
Mongst Jovialists will breed much discontent,
They with the Virgins Spike are neerely clos'd,
Religious Jupiter is by them oppos'd,
For hee's torn'd Hypocrite, and given to factions,
The Crosse is in his brest, the devill in's Actions.

The Julian, or

The Julian, or
English Account

The two Inferiours very nigh the Sun,
Co-rising with Antares, and the Moone,
Just at her full opposing doth declare
A manifest and suddaine change of aire,
And angry Mars with Hermes mingles rayes
Which many men will very much displease.

English Account

Now having walkt through 12 celestially Signes,
And view'd the motions of the wandering seven,
Felt the effects of Staires, whose light to shines
All creatures share in't, that are under heaven,
Let us strike saile, and so conclude our story,
Giving to God all honour, power, and glory.

A Prognostication

Booker 1643.

A Description of the severall parts of the Almanack for this present Yeare. 1643.

In the first Columnne is placed the golden number so called for the excellent use it hath in finding the day of the change of the M : This yeare it is 10. And in this my Kalender is noted in a red Character or figure over against such a day of the Moneth as the Moone changeth on: The next yeare it will be 11. when I shall have occasion to speake more thereof; And every yeare it increaseth one till it have made the number of 19. And then it begins againe. The second Columnne is the dayes of the Moneth. The third Columnne is the dayes of the weeke. A being the Sunday letter in our accompt. The fourth Columnne hath Feasts and holy dayes, the beginning and end of Terme; the places of the Planets, Orientall when they are to bee seene before Sun rising, Occidentall when they are to be seene after Sun set, &c. The fifth is the signe and degree the Moone is in every day at noone. The sixth Columnne is the houre and minute of Sun rise at London, by helpe whereof may be known his setting the length of the day and night every day throughout the yeares.

Double the houres and minutes of Sunne rise (60. minutes make an houre) and they make the length of the night. Subtract the houres and minutes of C rise from 12. houres and the remainder is Sun set.

Double the houres and minutes of Sun set, and you have the length of the day, it is so easie. Example is needlesse.

The seventh Columnne is a probable conjecture of the weather from the Motions of the Starrs and Planets with the other some new aspects most in force this yeare, with the daye when such conjunction or aspect happens.

Observe that in this Almanacke of mine for this Yeare (a) stands for afternoone, (b) for beforenoone (m) for morning, (n) for night: Examples in all these in October this yeare, on the second day I finde these Characters, $\text{J} \odot \text{M}$ 3. M. which sheweth that at that time, viz. at three of the Clocke in the morning is an opposition of Jupiter & Mars: The third day I find, $\text{J} \odot \text{V}$ 3. a which is an opposition of the Sun and Iupiter at three of the clock afternoone. The seventh day I finde $\text{J} \odot \text{S}$ 10. b. which is a Coniunction of Mars and the Sunne at ten of the clocke before noone, And the 26. day I find $\text{J} \text{S}$ 7. N. which is a conjunction of Mars and Venus at 7. of the clock in the night: In this Columne is a probable conjecture of the Weather in every moneth with other Astrologicall observations, &c.

On the other page on the right side thereof is the forraigne accompt D. being Sunday Letter, it being tenne dayes before the Iulian or English accompt: And to that is ioyned the true accompt to the yeare, 1734. (if the World last so long) F. being Sunday letter being two dayes before and truer then the Forraigne computation, and 12. dayes before and truer then our English accompt. But of this more (God willing) hereafter.

A briefe description of the foure quarters of this yeare.

The Spring begins on Friday the tenth of March, 34. min. past 3 of the Clock in the afternoone: The 4. degree of M in the Horoscope: wherein is Pars Fortunæ: Mars is culminating in an exact \square to the Ascendent and that part; And the Pleiades or seven Stars at that instant are in the mid-heaven: Mars passing by the Bulls eye, and other great and powerfull Starres in the signe Gemini, Mercurie is in the Cuspis Domus Religionis, but retrograde, and in \ast to J A: this instant, the Sun being newly separated from the conjunction of Malignant Saturne, applies to the body of Benevolent Iupiter: And the Moone about 12. houres before having bene in consultation with them all in the 8. house at the \odot in gresse, it betokens some notable occurrences to happen this Revolution: The Moone is Delatrix omnium impressionum & influentiarum aliorum Planatarum, que per Globum ipsius ad nos ultimo descendunt: Let us all pray to God that He would divert those heaueie iudgments impending over our heads, and grant peace in Church and Common-Wealth, Mars hath great dominion this yeare being direct in motion from the 24. of November 1642. to the

A Prognostication.

the end of October 1644. running the Zodiaque round, Vnde colligi possit bella fore continua, &c. Read Haly Libro 8. Cap. 7. of Mars, his being in the tenth house. But the Deflection from ♃ body to a ♀ of ♄ and a corporall uniting to ♀ at the happy ♄ of Iupiter and the Sunne which is on the 11. of March last at his setting in the Cuspis of the seventh house, in my apprehension is an argument of peace and much good to follow this great revolution. And it may be called a great Revolution indeed, for it immediately succeeds the most wonderful consumption of Saturne and Iupiter that hapned these many centuries of yeares by past. or shall be to the end of the World if wee may give credite to diuine and humane computations.

*perlege, scrutatus veterum monumenta Sophorum,
Quicquid habet Latium, quicquid & Hellas habet.
Quicquid habet veterum non fictæ pagina fama,
Hos cæli monitus quo cœaris, habet.
Non fuit illius Regni mutatio, quæ non,
Significata prius certa per astra foret.
In promptu est, miseri quæ sit turbatio mundi,
Illius at nemo dicere fata potest.
Orandum est, vitæq; modus melioris agendus,
Placari haud alia vult ratione Deus.*

Of the Summer.

Summer beginneth (or rather it is Midsummer) this Yeare when the Glorious Sun entereth the first minute of Cancer which is on Sunday the 11. Day of Iune at 55. min. past 6. of the Clock in the afternoon, The benevolent planet Iupiter, is angular in the North in the exaltation of the Sun in 20. degrees of ♊ in a perfect Δ to the Ascendent bring ♄ his house and loy, which promisseth much good to happen this Summer: For thus say the Astrologers. Aerem temperatum & Ventos septentrionales efficit medicres tamen ex quibus animalia & semina confortantur. And for that hee is in the fourth house, and very strong, Culturam agrorum fortunatam, Ex quibus magnum proventum sponder, And yet I helieve his \square to Mercury will produce a great Crisis or alteration of ayre, (Apertio portarum) tending to great windes, &c;

Of Harvey.

Of Winter.

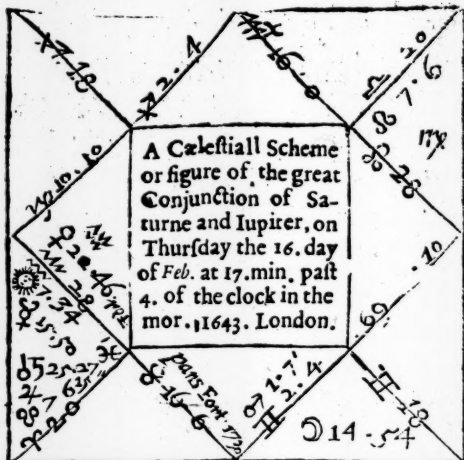

WInter beginneth this yeare on Monday the eleventh day of December 5. minutes past 9. of the clock in the night, At which instant of time, The beginning of the cold and dry signe of *♄* is in the ascendent: And in the mid-heaven the *♃* is applying to the seaven Stars: Likewise Mercury who is Lord of the Telescope being in conjunction with fiery Mars in the North Angle, and both of them Coniunging with the great Star, Cor Scorpii: all ming about halfe an houre past 6. in the next

morning, are arguments of great winds and tempests, which is much augmented by the then present Quarte of Saturne and the Sun at the Sun's entrance into this Winter solstice, causing Aperiō Portarum Magna, so Frost and Snow, or Raine in some places, a strong Index of the power of the heavenly bodies over us, and of the truth of Astrology, Licet vero tota illa Doctrina, quæ Cæli & Syderum cum in Mundum Elementarem, tum in ipsum hominem microcosmum influxus scrutatur quam plurimis errorum labyrinthis involuta sit, tamen nulla sui parte magis anceps & incerta existit, quam in hac, quæ de Auræ mutationibus meteorologicis prædictiones proferre conatur.

*Astra Regunt homines, mens libera sydera vincit.
Est Deus in Cælis, hunc cole, tutus eris.*

A Prognostication.

*conuentus grauis & grandis saturni &
jovis, rara proferi orbe xplanissi mo.*

In this Celestiall great meeting Saturne hath 2. grades 6. min. of South Latitude Descending and Iupiter 1. grade 6. minutes of the same latitude. Therefore Iupiter is elevated above Saturne, *Conjunctio magna dicitur quando Saturnus & Iupiter spatio Annorum 794. dierum 314 (scu numero rotundo, spatio Annorum 800.) ita percurrunt duodecim Zodiaci signa ut Denuo conjungantur sub initium primi conventus sui in trigono Igneo: This great conjunction hapneth, in 25. degrees, 27. minutes and 15. seconds of Pisces in the second house of the heavens where the Sun Mercury, Saturne, and Iupiter convene altogether. The Moone having bene lately with Mars and the Bulls eye, and newly left the Quadrate of the Sunne in a present quartile of Mercury conveys the rayes & influence of them all to the Quarters*

files of the two Grand Superiors meeting in the Interim
with a Trine of Venus, And as the Author of the Malqua-
rade du Ciel in his Marginal notes saith, if this most great
conjunction bee not attended with most notable events
(most probably for much good) through greatest part of
Europe, All Mathematicians must confesse they yet under-
stand not the dialect of Heaven: And in another margi-
nall note there where hee saith, it is the most notable con-
junction, yet ever was, so I agree with him, and adde, or
ever shall be. For if we adde 800. yeares to this yeare, it
will be a number much exceeding the continuance of the
World in any computation I ever yet met with all. But
of this no man knoweth, I shall adde, Sub octavo trigono
igno hoc quoque tempore, Imperium Romanum magnas muta-
tiones passurum est, quas experientia potius commitemus, quam
ut nostrum de illis iudicium feramus: I reade in Speculo muni-
di: Iohannis Henrici Alstedij, That Ab Anno 1603. ad An-
num 1642. (It should bee 1643.) Maximam universus orbis
experietur mutationem, nam Istorum Annorum 40. spatio ad fi-
nem decurrit septima revolutio Planetarum: And in the same
page, Viz. pag. 482. Anno Christi 1642. (It should be 1643.)
accidet conjunctio Saturni & Iovis in Ariete, que portendit novi
alicujus imperii revolutionem.

The next great conjunction that will happen will be in
1663: And the next after that in Neere Cor Leonis in
1683. To goe further I shall not need to calculate, for I
am of the same opinion with the Noble Napier Lord of Mar-
chistoun in Scotland in his 14. Proposition in his plaine
discovery of the whole Revelation of Saint Iohn, Read it
at leisure.

*Stella Jovis Felix cælo comp'ætitur alto,
Sæcula nunc veterum mutantur, mox nova surgunt,
Atque alias Mundo leges, ritusque reportant,
Et rerumque vices mutantur, Regnaque reges
Accipiunt alios, & summa sede reponunt.
Ast quoque quæ nostris jamjam ventura sub Annis,
Et melior, nostræ legis, vix pauca refringet,
Aspera quæ nimium, sacris & dura ferendis,
Et Genus Omne mali tollet, pompasque sacrorum.
At Regem dabit Innocuum, qui terminet orbem,*

A Prognostication.

*Et Reges Imperio populos gentemq; rebellem,
Imperio subdet, Toti & dominabitur Orbi.*

*Haſſenus Laurentius Bonincontrus in libro tertio Rerum
Caeleſtium in Vaticinio futurae conjunctionis Saturni
& Jovis Foll. 79.*

*Quicquid erit, Dominum Caeli terraeque precemur,
Ipſe ſui Curam, Paſtor Oviliſ agat.
Aduerſuſque lapos, immanſuctoſque Leones,
Deſcendat, Trepidat & tu eatur Oves.
Hoc ego ſupplicibus precor optima numina Votiſ,
Qui pius eſt Cupida mente precetur idem.*

Some Astrologicall Remembrances.

IN my Observations of the Revolution of the yeare 1640
I amongst others I observed that Belliger & Iracundus Mars
Anni hujus Dominus, vim I & Rabiei paſſim Capricornistiſ &
toti eius Quadrangulo tam diu in medium immittere ut parum
tranquillitatis illis remanſurum ſit, & quod malum maxime J &
& h ſub avicibus hoc Anno in Humano generi Hiſ palentis
authoritate, igne & gladio exalperabit, Roſea Jovis proſapia
Contentiones & multa nova percipet & collabentur deſyderabilia
ipſorum; & claudicabit ſanitas eorum. And in the ſame Revo-
lution of that yeare, having found Iupiter and Mars to have
been in conjunction the ſixth of march in five degrees 34.
of Capricorne where Iupiter is Cadent and at the Sunn's
entrance into V that yeare Mars newly ſeparated from Iu-
piter, I thought it a ſtrange conſunction, and that no doubt
it would produce ſome ſtrange matters concerning the per-
ſons ſignified by Iupiter or the Royaliſts & Martialiſts. Where-
upon ſearching ſome of the Maſters of Aſtronomy, I
found in Guido Bonatus his Aſtronomy, 4. part. cap. 34. Ubi ſe
vety

very words, Si fueris suspicatus utrum in Anno quem revolvs
 sint futura praelia, seu dissensiones, & unde excitentur, et a quibus,
 Aspice illi rei secundum modum quem tradiderunt nobis Antiqui,
 et specialiter ille reverendissimus predecessor noster Albumazar,
 qui fuit in revolutionum Annorum scientia, etiam in omnibus alijs
 partibus Astronomiæ proficius et valde astutus et audax, eriges
 enim tunc figuram, ad Revolutionem Anni, et Constitue ascen-
 dens, et ceteras domos et planetas Omnes in domibus in quibus
 fuerint, et Aspice Martem et vide a quo ipse separetur, vel a quo sit
 tunc seperatus, Dixit enim Albumazar quoniam ille est qui mi-
 sit eum, et qui excitavit Bellum, quamvis fuerit fortuna ille a
 quo seperatus fuerit Mars, etiam si fuerit Iupiter, tamen erit
 excitator Belli de personis, quæ significantur per Iovem, et de po-
 tentioribus, et possibile erit quod sit de genere Episcoporum et si-
 milium Hactenus Guido Bonatus, I am sive there was then
 such a conjunction, and that then Mars was newly sepe-
 rated from Iupiter. Now at that time and since to this day
 the effects have answered, let the world iudge, so fearing
 what since hath come to passe, in another place of that
 yeares observations, I made use of these words, Da Pa-
 cem Domine in Diebus nostris S. B. The Licenses expun-
 ged all this, and defaced it with a Delcatur, I wonder
 how they love truth or peace, that will not suffer us to
 speak of it or pray against War: I have that yeares Prog-
 nostication and S. B. his obliterations under his owne
 hand in my Custody to witness the truth. Was there not
 good ground of Feares and Jealousies? If we should re-
 member the Eclipses of the Sonne and Moone, in 1639.
 and since that time, and the great configurations of the
 Planets such as the Coniunction of the two malignant,
 ♄ and ♀ three times in 1640. Viz. in June, August, and
 September, and the ☐ of them in the end of December 1641
 and beginning of January, 1642. And thereto ande the ☾
 of ♀ and ♄ the middle of May, as likewise the ☾ of Saturne
 and Mars againe in the same, May the 27. day, with other
 great ☾ and aspects of the superiour bodies, and compare
 the times occurrence: we may easily see God forewarnes
 us of his iudgements by his heavenly Wiltels; what bloody
 Murders, Treasons and Treacheries, what unheard of
 cruelties, have beene acted in Ireland, by the Rebels there,
 the powder plotting blond thrifty Papists, and their ad-
 herents possibly affected persons? Was there not great
 cause of Feares and Jealousies, such a fire is kindled that it
 is even come to our owne doores, threatening Us with un-
 naturall intestine Wars.

A Prognostication.

Things were growne so high they could not be worse, Ecclesiasticall dissensions comm only end in civill: Divisions in the Church cause distractions in the State. And as little Wedges make way for greater, and as the Small Por is the forerunner of a greater plague so small Conjunctions of the Planets are the prodium of the greater, The meaning is, small punishments (if repentance for sin prevent not) are sure tokens of Gods greater judgments: The Axe is laid to the root of the Trees, Luke 3.9. And the time is come that judgment must begin at the house of God, 1 Pet. 4. 17. I hope this great Conjunction of h & V I have so much mentioned this yeare, is a forerunner of a thorough Reformation: Hujus conjunctionis ignis (saith Alsted) consumet omnes Storias & feces Urbis Romæ: Read the Paraphrasticall exposition and Historiicall application of the learned Napper upon the 14. of the Revelation: which I hope will in few yeares be effected.

*Auspicijs Synodi rarum portenditur Omen,
Cui dat principium triste hodierna dies?
Quicquid id estigiur, quod signa minantur Olympi,
Nos decet assidua voce rogare Deum:
Leniat, ut penasq; graves, clademq; malorum,
Nosq; velit tantis eripuisse malis.*

Non Calisfydera & Astra, (que sunt quasi Dei Castra) sed peccata nostra atq; scelerata monstrofa, portentosa, ac prodigiosa magnam Vim malorum & calamitatum nobis ostentant, portendunt, pramonstrant atq; praeiungunt.
